

libero Replay™

Libero Replay is a recording and playback system that allows recording multiple SDI sources and viewing them simultaneously in a user-friendly interface.

- Stable for 24/7 operations
- Frame-accurate record among all video sources
- SD/HD/UHD/4K support(*)
- Multiple input source support (SDI/NDI)
- Auto-locating metadata timecode in the timeline
- Input/output video preset configuration
- CPU, RAM, and storage capacity monitoring
- SDI/NDI output support
- Wide range of file format compatibility
- Multi-language support
- Advanced tagging feature while recording
- Customizable tagging buttons
- Zoom feature to record a specific fraction of the video
- Trim and export between marked IN/OUT points even for growing files
- Support for growing-file editing (Adobe Premiere, GV Edius)
